How to connect a iPhone, iPod, or iPad to wireless

On most wireless phones, connection to the internet is possible through 3G or wireless. In areas in which 3G is not available, wireless might be. These instructions are to help you connect to wireless automatically wherever there is a wireless connection.

1. Turn your device on
2. Click on the settings tab to view all of the devices settings.
3. Click on the tab that says "Wi-Fi". This will let you know if your Wi-Fi antenna is on and what Wi-Fi networks you are able to connect to.

3. Click on the Safari tab to open up your internet browser.

4. There will be steps just like the ones you did to connect your laptop to the internet.
5. Fill out the following spaces:
   - Name
   - Class Year
   - Residence Hall and Room number
   - etc.

6. Click “OK” and exit out of Safari

7. Click back into the internet browser and your internet should be up and running.

**Troubleshooting**

*If you run into any problems such not being able to get Wi-Fi, you may not be in an area where there is a Wi-Fi connection or some of the Wi-Fi networks are password protected because they are private networks. Make sure you are in an area where there you can get a Wi-Fi connection and that you are able to connect to the network without a password.*
